Preface	xv
List of Contributors	xix
1 Molecular Mechanisms Regulating Actin Filament Dynamics at the Leading Edge of Motile Cells	
<i>Thomas D. Pollard</i>	1
Inventory of components	2
The ground state of the system	5
Signalling pathways	6
Activation of the Arp2/3 complex	8
Growth of the branched actin filament network	10
Filament ageing, remodelling and disassembly	10
Recycling ADP-actin subunits	12
Reaction to a chemoattractant	12
Reaction to the withdrawal of a chemoattractant	12
Acknowledgements	13
References	13
2 The Role of Talin and Myosin VII in Adhesion – A FERM Connection	
<i>Margaret A. Titus</i>	19
Adhesion receptors in <i>Dictyostelium</i>	22
Links between the <i>Dictyostelium</i> cytoskeleton and adhesion	24
A link between M7 and talin?	28
The relationship of DdM7 to another FERM myosin, M10	31
Conclusions	32
Acknowledgements	32
References	32
3 Do Class I Myosins exert their Functions through Regulation of Actin Dynamics?	
<i>Thierry Soldati and Claudia Kistler</i>	39
Introduction	40
Structure function analysis of Class I myosins	44

Phenotypes resulting from manipulation of class I myosins	48
Class I myosins and the actin dynamics connection	49
Conclusions and outlook	52
Acknowledgements	54
References	54
4 Ephrin-regulated Contact Repulsion of Growth Cones	
<i>Lene K. Harbott, Daniel J. Marston and Catherine D. Nobes</i>	61
Introduction	62
Eph receptor and ephrin families	62
Eph receptor/ephrin regulation of axon guidance	62
Eph receptor/ephrin mediated control of cell segregation	63
Eph receptor/ephrin signalling	64
Eph receptor activation by soluble ephrins rapidly stimulates the assembly of filamentous actin structures in fibroblast cells	65
EphB2 and EphA7 induced lamellipodial protrusion is mediated by the small GTPase Rac	65
Role of Rho GTPases in ephrin induced growth cone collapse	67
Conclusions	71
References	72
5 Interplay between the Actin Cytoskeleton, Focal Adhesions and Microtubules	
<i>Christoph Ballestrem, Natalia Magid, Julia Zonis, Michael Shtutman and Alexander Bershadsky</i>	75
Introduction	76
Actin, microtubules and cell–matrix adhesions in crawling cell locomotion	78
Mechanosensory function of focal adhesions and its modulation by microtubules	81
mDial as a possible coordinator of actin, focal adhesions and microtubule assembly	84
Conclusion and perspectives	91
References	93
6 Initial Steps from Cell Migration to Cell–cell Adhesion	
<i>Jason S. Ehrlich, W. James Nelson and Marc D. H. Hansen</i>	101
Introduction	101
Epithelial cell–cell adhesion complexes	102
Molecular interactions and functions of classical cadherins	103

Examining E-cadherin distribution during cell–cell adhesion in live cells	104
Mechanistic insights into E-cadherin function during cell–cell adhesion	106
The role of Rho family small GTPases and membrane dynamics in cell–cell adhesion	106
Rac1-containing lamellipodia drive cell–cell contact formation between MDCK cells	107
Cell–cell contact induces changes in Rac1 complexes	108
Effects of Rac1 mutant expression on endogenous Rac1 complexes and cell behaviour	108
Linking Rac1 complexes back to mechanisms of cell–cell adhesion	111
Acknowledgements	112
References	112
7 Using Bioprobes to follow Protein Dynamics in Living Cells	
<i>Mark R. Holt, Daniel Y. H. Soong, James Monypenny, Ian M. Dobbie, Daniel Zicha and Graham A. Dunn</i>	117
Fluorescence resonance energy transfer (FRET)	118
Fluorescence lifetime imaging microscopy (FLIM)	120
Total internal reflection fluorescence (TIRF)/evanescent wave microscopy	122
Fluorescence speckle microscopy (FSM)	125
Fluorescence localization after photobleaching (FLAP)	127
FLAP: Image acquisition and image processing	128
FLAP: Some points to consider	131
Concluding remarks	132
Acknowledgements	132
References	132
8 Actin Filament Assembly: The Search for a Barbed End	
<i>Craig F. Stovold, Stewart J. Sharp and Laura M. Machesky</i>	135
The Arp2/3 complex	137
WASp family proteins	138
The WASp-Arp2/3 pathway	139
The role of Ena/VASP proteins	144
Conclusions	146
References	147

9	Role of WASp Family Proteins in Cytoskeletal Reorganization and Cell Motility	
	<i>Tadaomi Takenawa and Shiro Suetsugu</i>	153
	Introduction	153
	WASp and WAVE family proteins	154
	WASp and WAVE activate the Arp2/3 complex through the VCA region	155
	Mechanism of activation of N-WASp, WAVE1, and WAVE2	157
	N-WASp is involved in podosome formation and tubulogenesis	159
	Conclusions	161
	References	161
10	Regulation and Function of the Small GTP-binding Protein ARF6 in Membrane Dynamics	
	<i>Thierry Dubois, Emma Colucci-Guyon, Florence Niedergang, Magali Prigent and Philippe Chavrier</i>	165
	Intracellular localization of ARF6	166
	Regulation of ARF6 activation	167
	Function of ARF6 in polarized membrane delivery at the plasma membrane	168
	Events downstream of ARF6 activation	170
	Acknowledgements	171
	References	171
11	Chemotaxis of Cancer Cells during Invasion and Metastasis	
	<i>John Condeelis, Xiaoyan Song, Jonathan M. Backer, Jeffrey Wyckoff and Jeffrey Segall</i>	175
	Chemotaxis to EGF	175
	Events that define the leading edge during chemotaxis	179
	Is actin polymerization the initial asymmetry generating event?	180
	Do the early and late actin polymerization transients result from different mechanisms?	182
	Conclusions	184
	References	186
12	Dynamin and Cytoskeletal-dependent Membrane Processes	
	<i>James D. Orth, Noah W. Gray, Heather M. Thompson and Mark A. McNiven</i>	189
	Introduction	189
	Participation of dynamin in actin-based membrane dynamics	193
	Conclusions and perspectives	198
	References	199

13	Regulation of Microtubule Dynamics in Migrating Cells: a New Role for Rho GTPases	
	<i>Torsten Wittmann and Clare M. Waterman-Storer</i>	203
	Introduction	203
	Centrosome reorientation downstream of Cdc42	207
	Microtubule stabilization downstream of RhoA	209
	Regulation of microtubule dynamic instability downstream of Rac1	210
	Conclusion	213
	References	213
14	Calpain Regulation of Cell Migration	
	<i>Anna Huttenlocher</i>	219
	Basic steps of cell movement	220
	External factors that regulate cell migration	220
	Integrin receptors and focal adhesions	222
	Calpain	222
	Mechanisms of cell detachment and focal adhesion disassembly: a role for calpain	225
	Calpain during adhesion formation and directional migration	227
	Conclusions	229
	References	230
15	Role of Villin in the Dynamics of Actin Microfilaments	
	<i>Rafika Athman, Sylvie Robine and Daniel Louvard</i>	235
	Introduction	236
	Villin, a structural actin-binding protein	236
	Villin as a regulator of actin dynamics	240
	Perspectives	242
	References	244
16	Scar, WASp and the Arp2/3 Complex in <i>Dictyostelium</i> Migration	
	<i>Simone Blagg and Robert Insall</i>	247
	Introduction	247
	The Arp2/3 complex and WASp family proteins	248
	Control of actin dynamics in <i>Dictyostelium</i>	252
	Evolutionary implications	254
	Coupling signalling pathways to Arp2/3 dependent actin polymerization	255
	References	257

17	Directional Sensing: Subcellular Targeting of GPCR Downstream Effectors During Chemotaxis	
	<i>Satoru Funamoto and Richard A. Firtel</i>	261
	Introduction	262
	GPCR-mediated lipid signalling in chemotaxis of amoeboid cells	262
	Mechanisms controlling PH domain localization and the role of PI3K in chemotaxis	263
	PI3K translocates upon stimulation with a chemoattractant	265
	PTEN as a negative regulator of the D3-PI signalling pathway in chemotaxis	267
	Chemotaxis regulated by MEK kinase signalling	269
	The initial asymmetric signal and downstream asymmetric signals	271
	References	272
18	Cell Crawling, Cell Behaviour and Biomechanics during Convergence and Extension	
	<i>Ray Keller and Lance Davidson</i>	277
	Introduction	277
	The diversity and complexity of convergence and extension	283
	Extension by shape change, orientated division and growth	286
	Bipolar traction	286
	Do the intercalating cells actually 'migrate' on one another?	287
	Dynamics and stiffness: how does a dynamic tissue push?	289
	Cell-cell and cell-matrix adhesion in convergent extension	291
	Extracellular matrix and cell intercalation	292
	The special function of bipolarity	293
	References	293
19	Regulation of Cell Migration <i>In Vitro</i> and <i>In Vivo</i>	
	<i>Donna J Webb, Karen Donais, Shin-ichi Murase, Hannelore Asmussen and Alan F. Horwitz</i>	299
	Introduction	300
	Adhesion dynamics in migrating cells	301
	Adhesion disassembly at the cell rear	304
	Intracellular trafficking of adhesion molecules	306
	Migration <i>in vivo</i>	309
	Conclusions	311
	References	313

20 Genes that Control Cell Migration during Mouse Development	
<i>Carmen Birchmeier</i>	317
Introduction	317
Migration of neural crest cells	318
ErbB receptors and their ligand, Nrg1	318
Nrg1, the ErbB2/ErbB3 receptors and migration of neural crest cells	320
Sox10 controls the expression of ErbB3 during development of neural crest cells	321
c-Ret and Eph tyrosine kinase receptors and the development of neural crest cells	322
Development of migrating muscle precursor cells	324
c-Met, its ligand SF/HGF and the Gab1 adaptor	324
c-Met, SF/HGF and Gab1 control delamination of migrating muscle precursors from the dermomyotome	325
The homeobox gene Lbx1 is essential for correct target finding of migrating muscle precursor cells	327
Eph receptor signals during migration of muscle precursor cells to the limbs	328
Conclusions	328
References	328
Index	331
